

GW2 or GW3 Wireless Module for use with Pulse Output Devices

Features

- Interface with pulse output (solid-state or reed switch) devices including water, gas, electric meters, humidity and temperature sensors.
- Up to 3 individual devices.
- Includes 120 VAC power supply module.
- Compatible with E-Mon D-Mon wireless metering systems.
- Plug-and-play installation. Self-configures to the wireless mesh network.
- Contains local storage for 2+ months of 15 minute interval data.
- Allows creation of graphs, charts and usage statements via E-Mon Energy software.
- Wireless transceiver is FCC certified not to interfere with existing infrastructure.
- Wireless mesh network operates in the 915 MHz frequency hopping spread-spectrum license-free band. No cellular wireless service contracts are required.
- Wireless modules can be mounted inside buildings within approximately 500 feet line-of-sight from each other and up to 200 feet through walls, depending on wall material.
- Devices can be mounted up to 200 feet away from wireless module.
- Automatic time synchronization.
- Automatic network acquisition at power ON.
- Utilizes EKA Systems technology.

Dim: 7" H x 6" W x 2" D
